Java SE Development Kit 7 Downloads

Thank you for downloading this release of the Java™ Platform, Standard Edition Development Kit (JDK™). The JDK is a development environment for building applications, applets, and components using the Java programming language.

The JDK includes tools useful for developing and testing programs written in the Java programming language and running on the Java platform.

Looking for JavaFX SDK?

JavaFX SDK is now included in JDK 7 for Windows, Mac OS X, and Linux x86/x64.

Static Analysis

eclipse

JUnit

JDepend

Clover

CodePro

What is Static Analysis?

- **Analysis of computer software that is performed without actually executing programs**
- **Performed on source code or Object code**
- **Performed by automated tool with human analysis**

eclipse

JUnit

JDepend

Clover

CodePro

Why we need Static Analysis?

- To Check Errors **Before** Compile it.
- To Calculate **Efficiency** of Source.
- At the company, you are not alone.
- If source line has more than 10,000 line, can you remember every part of source code?

eclipse

JUnit

JDepend

Clover

CodePro

Why we need Static Analysis?

I am profiling my game on low-end Pentium 4 and found out that ~85% of execution time is wasted on calculating sinus, cosinus and square root (from standard C++ library in Visual Studio), and this seems to be heavily CPU dependent (on my I7 the same functions got only 5% of execution time, and the game is *waaaaaaaaaaaay* faster), . I cannot optimize this three functions out, nor calculate both sine and cosine in one pass (there interdependent), but I don't need too accurate results for my simulation, so I can live with faster approximation.

Source : <http://stackoverflow.com/questions/18662261/fastest-implementation-of-sine-cosine-and-square-root-in-c-doesnt-need-to-b>

eclipse

JUnit

JDepend

Clover

CodePro

Why we need Static Analysis?

- Binary Performance Time is **Machine dependent**
- Cause now days **ALU** is **SO MUCH Powerful**, old solution may not work.

JUnit

eclipse

JUnit

JDepend

Clover

CodePro

JUnit

JUnit

eclipse

JUnit

JDepend

Clover

CodePro

What is JUnit?

- **unit testing framework** for the Java programming language. Important in the development of **test driven development**.
- **<http://www.junit.org/>**

JUnit

eclipse

JUnit

JDepend

Clover

CodePro

What is Unit Testing?

- method by which **individual units of source code**, sets of one or more computer program modules together with associated control data, usage procedures, and operating procedures are tested to determine **if they are fit for use**.

JUnit

eclipse

JUnit

JDepend

Clover

CodePro

Goal of unit Testing

- isolate each part of the program and show that the individual parts are correct.

JUnit

eclipse

JUnit

JDepend

Clover

CodePro

Benefits of Unit Testing

- Find problems early
- Facilitates change
- Simplifies Integration
- Documentation

JUnit

eclipse

JUnit

JDepend

Clover

CodePro

Limitation of unit testing?

- Testing will not catch every error in the program

JUnit

eclipse

JUnit

JDepend

Clover

CodePro

Process of JUnit

1. **Set up** : 테스트 진행할 환경 마련
2. **Test** : 테스트 진행
3. **Tear Down** :
테스트 종료 후 프로그램 종료처리

Clover

eclipse

JUnit

JDepend

Clover

JDepend

Clover

CodePro

JDepend

JDepend

eclipse

JUnit

JDepend

Clover

CodePro

What is Jdepend?

- JDepend allows you to **automatically** measure the **quality of a design** in terms of its **extensibility**, **reusability** and **maintainability** to manage **package dependencies effectively**.
- JDepend traverses Java class file directories and generates **design quality metrics** for each Java package

JDepend

eclipse

JUnit

JDepend

Clover

CodePro

Why we use JDepend?

- 패키지 간 의존성 확인이 용이하다
- Cyclic Dependency를 찾아낼 수 있다.
⇒ 순환참조 관계의 패키지들은 부분적 배포가 불가능하고, 한 패키지를 변경할 때 그 영향력을 파악하기가 힘들다.
- 개발완료가 아닌 개발 중에도 문제점을 체크할 수 있다.

Metrics View

JDepend

eclipse

JUnit

JDepend

Clover

CodePro

Limitations of JDepend

Cyclic dependency detection **may not report** all cycles reachable from a given package

JDepend **does not collect** source code complexity metrics.

The design quality metrics generated by JDepend are **imperfect**.

Java **interfaces** are treated as **equals** with Java **abstract classes**.

JDepend does not currently support the calculation of Ca and Ce in terms of the number of classes inside a package that have afferent or efferent couplings to classes inside other packages.

How to install Clover?

<https://confluence.atlassian.com/display/CLOVER/Clover-for-Eclipse+Installation+Guide>

1. Installing the plugin

You can either install the Clover-for-Eclipse from the live Clover Eclipse update site or from a zipped archive downloaded manually.

1a. Installing the plugin from the live Clover Eclipse update site

In Eclipse 3.4 or Later:

1. Select from the menu "Help | Software Updates" to start the installation process.
2. Click "Available Software"
3. Select "Add Site..." and enter <http://update.atlassian.com/eclipse/clover> then click OK. This will point Eclipse to the Clover update site from where it will download the plugin and an entry to the sites in the
4. Expand the entry "http://update.atlassian.com/eclipse/clover" and its child entry "Clover 2,3,2" until you see "Clover 2 (for Eclipse 3,2/3,3/3,4)" and "Clover 2 Ant Support (3,2/3,3/3,4)".
5. Click the checkboxes next to "Clover 2 (for Eclipse 3,2/3,3/3,4)" and "Clover 2 Ant Support (3,2/3,3/3,4)" and then click "Install..."
6. The "Install" dialog should now show the two features to install. Click "Finish".
7. You may be asked if you agree to the license terms. If you agree, click the radio button next to '**I accept the license agreement**' and click the "Next" button.
8. Finally, you will be asked if you want to restart Eclipse after installing the plugin. Click "Yes" to restart and complete the installation.

Installing CodePro AnalytiX

Employ the comprehensive automated software code quality and security analysis toolkit CodePro AnalytiX to automatically improve software quality, reliability, and maintainability in developer applications. CodePro AnalytiX includes functionality previously provided by EclipsePro Audit and EclipsePro Test.

These instructions assume that you have already installed some flavor of Eclipse. If you have not, Eclipse can be downloaded from <http://www.eclipse.org/downloads/>.

[Sign up](#) to receive emails about Google Developer Tools.

Update sites

If you are already familiar with installing Eclipse plugins, you can just use the update site URL below for your version of Eclipse.

Eclipse 3.7 (Indigo)
<http://dl.google.com/eclipse/inst/codepro/latest/3.7>

The screenshot displays the Eclipse IDE interface with several key components:

- Package Explorer:** Shows a project named 'unittestestcase' with a sub-package 'main' containing 'mainclassTest.java'.
- Code Editor:** Displays the source code of 'mainclassTest.java'. The code includes a JUnit test method:

```

      @Test
      public void testAdd_1()
      throws Exception {
          mainclass fixture = new mainclass();
          int a = 1;
          int b = 1;

          int result = fixture.add(a, b);

          // add additional test code here
          // An unexpected exception was thrown i
          // java.lang.ClassNotFoundException:
          // at java.net.URLClassLoader$.r
          // at java.net.URLClassLoader$.r
          // at java.security.AccessControl
          // at java.net.URLClassLoader$.fir
          // at java.lang.ClassLoader.loadC
          // at com.instantiations.assist.e
          // at java.lang.ClassLoader.loadC
          // at com.instantiations.assist.e
          // at com.instantiations.eclipse.
          // at com.instantiations.eclipse.
          // at com.instantiations.assist.e
          // at com.instantiations.assist.e
          // at java.lang.Thread.run(Unknown
      
```
- Test Method Table:** A table showing the execution of the test method:

Test Method	fixture	a	b	result	Ass. ns
testAdd_1	new mainclass()	1	1	0	
- CodePro Tools Menu:** A context menu is open over the code editor, listing various tools:
 - Audit Code
 - Audit Code Using...
 - Compute Metrics
 - Compute Metrics Using...
 - Generate Factory Classes
 - Generate Test Cases
 - Find Similar Code (longer search)
 - Find Dead Code
 - Check Spelling
 - Repair Javadoc
 - Analyze Dependencies
 - Instrument for Code Coverage
 - Explore
- Test Case Generation Panel:** A panel on the right titled 'Test Case Generation' provides instructions:
 - Selecting your project (or a subset of files) in the Package Explorer / Navigator view, right click to get the context menu.
 - Select CodePro Tools > Generate Test Cases.

The Test Cases will be generated and a new Test project will be created.
